Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

tail=newnode:

void display(node*head){

Input: 5

```
10 20 30 40 50
Output: 10 20 30 40 50
   Answer
   #include<stdio.h>
   #include<stdlib.h>
   typedef struct node{
     int data;
     struct node *prev,*next;
   }node;
   node*tail=NULL;
   void insert(node**head,int value){
     node*newnode=(node*)malloc(sizeof(node));
   newnode->data=value;
     newnode->prev=NULL;
     newnode-> next=NULL;
     if(*head==NULL){
       *head=tail=newnode;
       return;
     }
     else{
       tail->next=newnode;
       newnode->prev=tail;
```

```
240701386
while(temp!=NULL){
    printf("%d " +^~
         printf("%d ",temp->data);
         temp=temp->next; V
       printf("\n");
    int main(){
       node* head=NULL;
       int n;
       scanf("%d",&n);
       for(int i=0;i<n;i++){
         int val;
                                                       240701386
        scanf("%d",&val);
         insert(&head,val);
      display(head);
    }
```

Status: Correct Marks: 10/10
